

Symantec™ Protection Suite Quick Reference Guide

Protect critical information so you can focus on your business

Is your business ready for a solution that will help you get ahead of the ever-changing threat landscape with greater efficiency, cost savings and confidence? The threats that challenge the security and availability of your organisation are changing. Get the protection you need in an easy-to-deploy suite. In the past, hackers only wanted notoriety from the malware they created, but today's cyber criminals want to steal sensitive information and sell it to the highest bidder. And they attack silently, not wanting to be discovered, and leave systems vulnerable.

Computer systems are also increasingly vulnerable to downtime or loss caused by a number of factors such as hard drive failure, OS corruption, user error or natural disaster.

Introducing Symantec Protection Suite:

Symantec Protection Suite creates a protected endpoint and messaging environment that is secure against today's complex malware, data loss and spam threats and is quickly recoverable in the event of failure. Reduce the cost of securing your environment and more effectively manage the inherent risks of today's IT infrastructures with Symantec's market-leading technologies.

With over 25 years of experience and leadership in security and backup and recovery, Symantec offers some of the most advanced and well-respected technology available, with integrated solutions that can help manage, secure and recover information from the data centre to mobile devices, independent of platform or operating system.

Symantec offers a protection solution for every size of environment; use the guidelines below to find the best fit for you:

Protection technology	10–99 seats		100+ seats

Note: Symantec Protection Suite Enterprise Edition Messaging Security features available for Exchange, Domino, Gateway and Instant Messaging, while Symantec Protection Suite Small Business Edition Messaging Security is only available on Exchange.

* Dedicated Server Memory is 2 GB for > 500 nodes; above recommended requirements are for < 500 nodes.

SALES TOOLS & TRAINING DEVELOPMENT

New! Symantec Protection Suite Small Business Edition

For small businesses (<100 nodes) that desire a comprehensive yet easy-to-use security and backup and recovery solution designed to protect their critical business assets

Symantec Protection Suite Small Business Edition is an easy-to-use, all-in-one suite that protects critical business assets by rapidly recovering computer systems and securing against today's complex malware and spam threats.

- Provides full endpoint protection and mail security protection
- Defends laptops, desktops and servers against email-borne virus threats and security risks
- Should be sold as an upgrade to those customers who are seeking endpoint protection plus additional email protection (formerly sold under the name Symantec Multi-tier Protection Small Business Edition)
- Symantec Protection Suite Small Business Edition:
 - **Protects completely:** delivers multiple layers of technology for your customer's small business
 - **Manages with ease:** simple to install, deploy and manage
 - **Provides confidence:** ensures systems and critical information are readily available

New! Symantec Endpoint Protection Small Business Edition

For small businesses (<100 nodes) that desire enterprise-level protection yet are looking for an easy-to-use security solution that is designed for their environment

Symantec Endpoint Protection Small Business Edition leverages award-winning Symantec Endpoint Protection technology that enables small businesses to protect against threats not yet identified by security vendors. It is built as a low-impact solution and is easy to install, deploy and manage, saving both time and money.

- **Pre-configured for small businesses**—saves time and effort with Symantec-recommended security defaults; no additional configuration needed and less than 20-minute deployment, so small businesses can focus on expanding their businesses and not worry about security
- **Deploy with ease**—install wizards simplify the ability to deploy agents across the customer environment
- **Superior performance**—minimise performance impact with superior boot-time and low overheads when it comes to everyday interaction with files and applications

New! Symantec Protection Suite Enterprise Edition

For customers looking for scalable multi-layer protection and recovery, this is the solution.

Symantec Protection Suite Enterprise Edition creates a protected endpoint and messaging environment that is quickly recoverable in the event of failure and is secure against today's complex data loss, malware and spam threats—controlling costs and managing risk.

- Provides unmatched protection against malware for laptops, desktops, servers, mail servers and gateways (formerly sold under the names Symantec Multi-tier Protection and Symantec AntiVirus™ Enterprise Edition)
- Scalable, so the asset protection can grow as your customer's business expands
- Symantec Protection Suite Enterprise Edition:
 - **Protects completely:** delivers multi-layer protection from endpoint to gateway
 - **Manages with ease:** unified management and administration allows you to simplify implementation and operations
 - **Provides confidence:** ensures systems and critical information are readily available

Symantec Endpoint Protection

For businesses demanding “best-of-breed” security at an affordable price, this is the solution.

Symantec Endpoint Protection is a flexible and comprehensive product that gives organisations of all sizes the capabilities they need today, with the ability to customise later.

- Fully integrated “best-of-breed” security product—with a single agent and single management console
- Contains antivirus, antispymware, firewall, intrusion prevention device and application control; these features can be enabled as needed
- Recent updates, greatly enhanced product quality and performance for all customer sizes
- Product is Network Access Control-ready (with a separate licence)
- Competitively priced for even more value—contains proactive protection from unknown threats and zero-day attacks; special pricing for users of competing products also available

Consider these additional products to increase your protection and add value

Symantec™ Network Access Control

Grants access only to endpoints that comply with defined security policies

- Symantec Endpoint Protection and Symantec Protection Suite Enterprise Edition are Network Access Control-ready**
- Agent is included—no extra agent deployment

Symantec™ Brightmail/Symantec™ Mail Security 8300 Series Appliance

Enables deployment of included comprehensive inbound and outbound messaging security at the messaging gateway on a physical appliance platform

- Physical appliance comes with pre-installed software and is easy to deploy and manage
- Unlocks the complete value of the Symantec Protection Suite for customers that haven't adopted VMware platform

Symantec Backup Exec™ System Recovery Server Edition
Enables restoration of complete Windows® servers in minutes, even to dissimilar hardware or virtual environments, with new functionality to automate physical-to-virtual conversions for immediate system recovery.

- Easily meet strict recovery time objectives (RTOs) by recovering complete servers in minutes, even from a bare-metal state
- Eliminate backup windows by capturing the entire live Windows system, without disrupting user productivity or application usage

Symantec Data Loss Prevention

Expands data loss prevention across endpoint, network and storage devices with unified policy and reporting.

- Discover and monitor confidential information wherever it is stored, both on and off the corporate network
- Define and automatically enforce unified policies to proactively protect secure information and prevent data loss

Altiris™ Client Management Suite from Symantec

Reduce costs associated with deploying, managing, securing and troubleshooting systems and gain control of IT with Altiris solutions from Symantec. They are built on an extensible management platform, so users can easily plug-in additional integrated functionality such as asset management, security, or backup and recovery when necessary, ensuring business continuity and employee productivity as organisational needs evolve. Some of the features include:

- Secure management with role-and-scope-based security
- Zero-touch OS deployment and migration
- Automated patch management
